

Project Profile

New York Giants Practice Facility Secaucus, NJ

End Use:

Professional Sports Indoor Practice Facility

Client:

New York Giants

Size:

214'x407'x95'
87,000 Sq. Ft.

The new indoor training facility for the 2008 Super Bowl Champions, The New York Giants, has become a reality. Heavy Structures teamed with a local builder, Hance Construction, Inc., to provide the steel building shell and erection services for the massive project.

The spacious facility has a clearspan of 214' with a gambrel shaped roof that provides 55' at the eaves and 80' at the ridge to accommodate kickoff practice. The building is 407' long and includes two ancillary areas for additional services.

The roof selected for the facility was a Solar White, 22 gauge metal standing seam metal roof system. The building walls were clad with a 2 ½" factory-insulated wall system with fineline corrugations. The exclusive Sky-Web® fall protection and insulation support system was also used on the facility.
